WEBINAR:
Incorporating Conceptual Models into Your Research Proposals

February 22, 2018
12-1pm PST

Webcast:  https://rcmarwebinarfeb2018.eventbrite.com

More information: nharawa@mednet.ucla.edu

Objectives:
1. To describe best practices for creating effective conceptual models
2. To discuss strategies for incorporating them into proposals for submission to NIH

Clemma Muller, PhD, MS
Assistant Research Professor at Washington State University

I am formally trained biostatistician and epidemiologist, who has been writing grants over 15 years. I have worked as a primary member of the writing team and as a coach or mentor for junior investigators on dozens of grant proposals across a wide range of funding mechanisms and research topics. This work includes creating conceptual models to enhance the readability and clarity of proposals with quantitative research aims. The seminar is based on concepts presented in a 1991 publication by Earp and Ennett, “Conceptual models for health education research and practice.” The presentation is augmented with best practices and examples from my own experience and additional publications.
